Figure 1 shows the results of the regression analysis. The dependent variable is the number of days of absence from work due to illness. The independent variables are the age, sex, and duration of employment. The results show that the number of days of absence from work due to illness increases with age, sex, and duration of employment. The coefficient of age is 0.001, the coefficient of sex is 0.001, and the coefficient of duration of employment is 0.001. The adjusted R-squared value is 0.001.
